The two-stage pyrolysis-catalysis of high density polyethylene has been investigated with pyrolysis of the plastic in the first stage followed by catalysis of the evolved hydrocarbon pyrolysis gases in the second stage using solid acid catalysts to produce gasoline range hydrocarbon oil (C 8 –C 12).The catalytic process involved staged catalysis, where a mesoporous catalyst was layered on ... Our mission is to promote the role and image of the chemical and molecular sciences among policymakers and the public, and to present chemistry as an essential and indispensable provider of solutions to global challenges. Mechanisms of catalyst deactivation - ScienceDirect

1.. IntroductionCatalyst deactivation, the loss over time of catalytic activity and/or selectivity, is a problem of great and continuing concern in the practice of industrial catalytic processes.

Nanocomposite - Wikipedia

Nanocomposite is a multiphase solid material where one of the phases has one, two or three dimensions of less than 100 nanometers (nm), or structures having nano-scale repeat distances between the different phases that make up the material.. The idea behind Nanocomposite is to use building blocks with dimensions in nanometre range to design and create new materials with unprecedented ...

Nanoparticle: An overview of preparation and characterization

Nanoparticle - Wikipedia

Fri, 14 Sep 2018 23:52:00 GMT Nanoparticles are particles between 1 and 100 nanometres (nm) in size with a surrounding interfacial layer. The interfacial layer is an integral part of nanoscale matter, fundamentally affecting all of its properties. The interfacial layer typically consists of ions, inorganic and organic molecules.
